### About This Website

This website exists in order to give UNCC students a way to learn about upcoming gaming related events both on campus and on livestreams.

This website was created by Connor Kells in Fall 2022 for ITIS-4166.

2. Explanation of additional features, if any.

*No additional features*

3. Explanation of status, stopping point, and issues if incomplete.

*Completed the project*

4. Discuss the easy and challenging parts of the assignment. How did you overcome all or some of the challenges?

*The most challenging sections of this project for me were sorting the events by categories and getting the second controller/router working. I overcame the issue with the second router/controller by going through each page/view one by one and getting them to work, instead of trying to do them all at once. Doing them all at one time ended up being overwhelming, so doing it one at a time helped me take it step by step. I fixed the issue with the categories by looping through the events to sort them into the correct category section on the website.*
